

The Smile Advantage

Smile Digital Health empowers healthcare organizations with a secure, intelligent, and interoperable Smile Health Data Platform. Our FHIR-First data platform and clinical reasoning engine drive open standards at the core of your data, decision making, and measurements with enterprise level scalability and performance. Smile's platform ingests, standardizes, and enriches healthcare data, creating a secure and trustworthy foundation for advanced applications. This ensures streamlined workflows, real-time insights, and optimized decision-making, leading to the cost savings and improved patient care examples below:

Who we Support

PAYERS

Data Modernization Initiatives

- **FHIR-First philosophy** that drives open standards at the core of your data for ease of integration with other systems and streamlined ingestion
- Enrichment components to drive the creation of a member **Golden Record**
- Delivering a competitive edge while **future proofing** your system by ensuring other FHIR interoperability solutions can be easily implemented

Digital Quality Measures & Compliance Transformation

- Supporting **HEDIS**, government, regional, and custom quality measures through FHIR-CQL powered real-time calculations for early intervention
- Ensuring **validated FHIR** source data accuracy with CQL across multiple compliance frameworks

CMS Mandate Solutions

- APIs that can simply integrate with existing UMs and Medical Necessity tools
- Built in **Consent management** tools to integrate with existing Consent application or be the enterprise consent service
- Automated **prior authorization** workflows with FHIR and Clinical Reasoning directly in Smile

PROVIDERS

EHR Optimization

- Seamless data ingestion and access to build a complete, structured, and standardized **longitudinal patient record** that can be trusted to drive clinical and business decisions.
- **Smart on FHIR** applications to extend the capability of EHR functionalities to clinicians and patients
- Streamlining workflows directly into the EHR through modern interoperability standards

MIPS Transformation to dQM & Expanded Quality Measures

- Supporting MIPS, government, regional, and custom quality measures with **real-time quality calculations** for early intervention.
- Validated FHIR source data to ensure accurate measurements with CQL

Care Gap Management

- Delivering concise, up to date **clinical actions** for clinicians to address at the point of care
- Streamlines guideline updates to one source for the whole organization
- Care Coordinators can **identify care gaps** during routine reporting at scale.

HEALTH DATA EXCHANGES

Data Orchestration

- **Automate ingestion** from disparate sources in bulk with near unlimited scalability
- Create subscription and notification events for convenient data access
- Multiple FHIR repository and tenancy for **data segregation** needs

Master Data Management

- Create a **universal Golden Record** of a patient from disparate sources
- **Match across FHIR data domains** to create and maintain a single source of truth for patient, organization, and Providers to ensure data quality and cleanliness

Consent and Authorization Management

- Sophisticated built-in FHIR Consent management tools to ensure patient privacy
- Robust authorization capabilities to provide proper and **granular access** to data

Transform the way you manage health data with seamless integration, real-time insights, and automated compliance.
